## Contents

<b>1</b>	<b>Installation</b>	<b>1</b>
1.1	Linux . . . . .	1
<b>2</b>	<b>Main Files</b>	<b>1</b>
2.1	init.el . . . . .	1
2.2	blendoit/init-blendoit.org . . . . .	1
2.3	blendoit/custom-file.el . . . . .	2
<b>3</b>	<b>Usage</b>	<b>2</b>

## 1 Installation

### 1.1 Linux

Backup your current `~/emacs.d` with the following command:

```
#+BEGIN_SRC emacs-lisp mv ~/emacs.d ~/emacs.d.bkp
```

```
#+END_SRC
```

Clone my configuration folder to your home directory:

```
#+BEGIN_SRC emacs-lisp cd ~ git clone https://github.com/Blendoit/
.emacs.d.git
```

## 2 Main Files

### 2.1 init.el

- This file's only purpose is to load my literate configuration.

### 2.2 blendoit/init-blendoit.org

- Load my personal literate configuration files.

### 2.3 `blendoit/custom-file.el`

- By default, all customization options available in Emacs' GUI that can be saved with `Options - Save Options` are saved here.
- This is useful to fool around with GUI customization options, without breaking our manually written code.

## 3 Usage

Each configuration file is commented.
