## Abstract

GNU Emacs is most often used as a text editor. The utmost level of customisation is afforded by enabling the user to rewrite *any* part of the source code and observe the editor's modified behaviour in real time. Since its inception in 1984, GNU Emacs has grown to be much more than a full-featured, high-productivity text editor—new *modes* have been written to interact with hundreds of file formats, including `.txt`, `.pdf`, `.jpg`, `.csv`, and `.zip` just to name a few. This configuration file itself was written in *Org mode*, a collection of functions enabling the harmonious mixing of code and comments in view of publication: this is the endgame of *literate programming*.

## 1 Preliminary setup

### 1.1 Garbage collection

Increase the garbage collection limit.

```
(setq gc-cons-threshold 100000000)
```

### 1.2 Custom file

Load settings created automatically by GNU Emacs Custom. (For example, any clickable option/toggle is saved here.) Useful for fooling around with `M-x customize-group <package>`.

```
(setq custom-file "~/emacs.d/blendoit/custom/custom-file.el")
(load custom-file)
```

### 1.3 Customization shortcuts

We begin by defining a user shortcut to this very file:

```
(defun find-init-blendoit ()
  "Jump to this very file."
  (interactive)
  (find-file "~/emacs.d/blendoit/init-blendoit.org"))
(global-set-key (kbd "C-c c") 'find-init-blendoit)
```

Now, different shortcuts for other customization actions:

```
(global-set-key (kbd "C-c v") 'customize-variable)
```

### 1.4 Backups

Backups are so important that they should be described right after the shortcut to this file.

---

```
(setq backup-directory-alist '((".*" . ,temporary-file-directory))
auto-save-file-name-transforms '((".*" ,temporary-file-directory t)
  backup-by-copying t      ; Don't delink hardlinks
  version-control t        ; Use version numbers on backups
  delete-old-versions t    ; Automatically delete excess backups
  kept-new-versions 20     ; how many of the newest versions to keep
  kept-old-versions 5      ; and how many of the old
)
```

## 1.5 Secrets

```
(setq user-full-name "Marius Peter"
      user-mail-address "blendoit@gmail.com")

(setq user-full-name "Marius Peter"
      user-mail-address "blendoit@gmail.com")
```

## 2 Bindings

### 2.1 Navigation

```
(global-set-key (kbd "C-s") 'save-buffer)
(global-set-key (kbd "C-b") 'ibuffer-sidebar-toggle-sidebar)
(global-set-key (kbd "C-w") 'kill-buffer-and-window)
(global-set-key (kbd "C-q") 'save-buffers-kill-terminal)
(global-set-key (kbd "C-o") 'menu-find-file-existing)
(global-set-key (kbd "C-r") 'counsel-recentf)
```

### 2.2 Org

Quick access to important Org mode functionalities.

#### 2.2.1 Agenda

The agenda displays a chronological list of headings across all agenda files for which the heading or body contain a matching `org-time-stamp`<sup>1</sup>.

```
(global-set-key (kbd "C-c a") 'org-agenda)
```

#### 2.2.2 Export

This creates a shorter binding for the most common Org export: Org to  $\LaTeX$ .

---

<sup>1</sup>An=`org-time-stamp=` can be inserted with `C-c .` (period)

```
(defun blendoit-org-quick-export ()
  "Org export to PDF and open.
  This basically reimplements 'C-c C-e l o'."
  (interactive)
  (org-latex-export-to-pdf)
  (org-open-file
   (concat (substring buffer-file-truename 0 -3) "pdf")))

(global-set-key (kbd "C-c e") 'blendoit-org-quick-export)
```

### 2.3 Mouse zoom

Zoom in/out of selected buffer using Alt + mouse wheel.

```
(global-set-key [M-mouse-4] 'text-scale-increase)
(global-set-key [M-mouse-5] 'text-scale-decrease)
```

## 3 Packages

List of package archives.

```
(require 'package)
(add-to-list 'package-archives '("melpa" . "http://melpa.milkbox.net/packages/") t)
(add-to-list 'package-archives '("org" . "http://orgmode.org/elpa/") t)
(package-initialize)
```

Ensure use-package is installed.

```
(unless (package-installed-p 'use-package)
  (package-refresh-contents)
  (package-install 'use-package)
  (eval-when-compile (require 'use-package)))
(setq use-package-always-ensure t)
```

### 3.1 Org

Phew, I can finally introduce Org mode! I am so **excited**.

```
(setq org-hide-emphasis-markers t)
(setq org-startup-indented t)
(setq org-directory "~/org")
```

```
(font-lock-add-keywords 'org-mode
  '(("^ *\\\[[-]\\\[\\] "
     (0 (prog1 () (compose-region (match-beginning 1) (match-end 1) "●"))))))
```

```
(use-package org-bullets
  :config
  (add-hook 'org-mode-hook (lambda () (org-bullets-mode 1))))

(let* ((variable-tuple
  (cond ((x-list-fonts "Liberation Sans") '(:font "Liberation Sans"))
        ((x-family-fonts "Sans Serif") '(:family "Sans Serif"))
        (nil (warn "Cannot find a Sans Serif Font.  Install Source Sans Pro."))))
  (base-font-color (face-foreground 'default nil 'default))
  (headline '(:inherit default :weight bold)))

  (custom-theme-set-faces
   'user
   '(org-level-8 ((t (@headline ,@variable-tuple))))
   '(org-level-7 ((t (@headline ,@variable-tuple))))
   '(org-level-6 ((t (@headline ,@variable-tuple))))
   '(org-level-5 ((t (@headline ,@variable-tuple))))
   '(org-level-4 ((t (@headline ,@variable-tuple :height 1.1))))
   '(org-level-3 ((t (@headline ,@variable-tuple :height 1.25))))
   '(org-level-2 ((t (@headline ,@variable-tuple :height 1.5))))
   '(org-level-1 ((t (@headline ,@variable-tuple :height 1.75))))
   '(org-document-title ((t (@headline ,@variable-tuple :height 2.0 :underline nil)))))

  (custom-theme-set-faces
   'user
   '(variable-pitch ((t (:family "Liberation Sans"))))
   '(fixed-pitch ((t (:family "Hack")))))

  (x-list-fonts "Hermit")

  • Beautiful bullet lists in Org mode!
```
